

WELDS

CONTINUOUS AND INSEPARABLE WELD SEAMS

Each piece of steel on a Keystone Ridge Designs' product is welded together by hand with a continuous, inseparable weld seam as opposed to an incomplete tack weld that is often seen on lesser-quality furnishings.

This complete weld seam technique strengthens the bond of steel components while smoothing the overall finished appearance.

By ensuring every contact point is fully-welded and free of pin holes, it is also a critical element in preventing moisture from causing corrosion.

Every seam is rigorously inspected by quality control to guarantee product consistency, quality and stability.
